Order Shipment Cycle Time

Definition & Measurement Details

What is Order Shipment Cycle Time?

The number of hours required to process a customer order, from the time when the order is placed until the time the order is shipped by the supplier.

Why should this KPI be measured?

Order Shipment Cycle Time measures the speed and productivity with which suppliers process and prepare orders for delivery to their customers. A high value for this KPI may be related to a number of

How is this KPI calculated?

The times of two events are used to derive this KPI: (1) the time that a customer places an order, and (2) the time that the order is shipped by the supplier. The difference of these two times is the difference of these
