IT Support Ticket Resolution (Unplanned) Cycle Time

Definition & Measurement Details

What is IT Support Ticket Resolution (Unplanned) Cycle Time?

The number of minutes required to resolve an unplanned incident-related IT support ticket (hardware failure, printer failure, server failure, connectivity failure, etc.), from the time the IT support employee arrives at the location where the work is to be performed until when the incident is resolved.

Why should this KPI be measured?

IT Support Ticket Resolution (Unplanned) Cycle Time measures the number of minutes required to resolve an unplanned incident-related IT support ticket (hardware failure, printer failure, server failure, connectivity

How is this KPI calculated?

Two values are used to calculate this KPI: (1) the number of minutes required to resolve an unplanned IT support ticket/service ticket, and (2) the total number of unplanned incident-related IT support tickets resolved during
