# Stocking Cycle Time

## Definition & Measurement Details

### What is Stocking Cycle Time?

The number of hours required to properly store materials or goods, from the time the materials/goods are received from the supplier until the time they are stored and recorded in inventory management tracking systems.

### Why should this KPI be measured?

Stocking Cycle Time measures the speed and productivity with which inbound logistics teams stock shipments from suppliers. A high value for this KPI can lead to a number of different warehousing issues, such as:

### How is this KPI calculated?

The times of two events are used to derive this KPI: (1) the time that the materials/goods arrive from the supplier, and (2) the time that the materials/goods are stored and recorded into the inventory management tracking system.

# Stocking Cycle Time

Benchmarks & Characteristics of High Performers

## Stocking Cycle Time

Sum of Time to Stock Incoming Shipments / Total Number of Shipments Received

### Characteristics of High Performers

- KPIs are well-defined, tracked and tied to performance reviews
- Robust self-service options for customer

Sample Size: XX

KPI Type: XX

Unit: XX

Is High or Low Best?: XX

**How to read this chart:** This chart summarizes the performance gaps between high (Top 5%), mid (Median) and low (Bottom 5%) performers for this Key Performance Indicator (KPI). For example, the column labeled "Top 5%" represents a company that outperformed 95% of the peer group observed for this metric.
