# Lost Time Case Rate (LTC)

## Definition & Measurement Details

### What is Lost Time Case Rate (LTC)?

The number of Lost Time Cases recorded multiplied by 200,000, then divided by the total number of employee labor hours worked over a certain period of time.

### Why should this KPI be measured?

Lost Time Case Rate (LTC) is an indicator of the diligence with which the company implements worker safety controls and procedures. High values for this KPI may be indicative of inadequate safety training programs.

### How is this KPI calculated?

Two values are used to calculate this KPI: (1) number of OSHA Lost Time Cases that occur in a year ÷ 200,000 and (2) the total number of employee labor hours worked in a year. The formula is:  $\frac{\text{Number of OSHA Lost Time Cases} \times 200,000}{\text{Total Number of Employee Labor Hours}}$
